## Assignment – 2 Python Programming

Ranjith kumar T 73151921043 KSR College of Engineering

## Question-1:

if b>60:

Build a python code, Assume you get humidity and temperature values (generated with random function to a variable) and write a condition continuously detect alarm in case of high temperature.

## solution: import random while True: a=random.randint(35,100) b=random.randint(50,100) print("\_\_\_\_\_\_\_") if a>40: print("High temperature is detected") print("Buzzer on,alarm sound is high") elif a==40: print("Temprature reached maximum thershold of 40 degrees celsius") else: print("Good temperature") #for Humidity

```
print("High humidity is detetcted")
print("Buzzer on,alarm sound is high") elif
a == 60:
    print("Humidity reached maximum thershold of 65 percent")
else:
    print("good humidity")
output:
```

```
High temperature is detected

Buzzer on, alarm sound is high

High temperature is detected

Buzzer on, alarm sound is high

High temperature is detected

Buzzer on, alarm sound is high

Temprature reached maximum thershold of 30 degrees celsi

High humidity is detected

Buzzer on, alarm sound is high
```

High temperature is detetcted High flu\*idity is detetcted

High temperature is detetcted

```
main.py +
